We're updating our face book page regularly so be sure and go to our Facebook page and like us so you can get in on any deals or sales early. The face book page is also updated with how to videos and promotions.

All About Fun Hobbies Forum

http://allaboutfunhobbies.com/hp_smf/index.php

All About Fun Hobbies forum is an R/C forum where we can all come together and ask questions and share knowledge. Not to mention great stories. The forum has a members section only. In that section we are listing upcoming deals, sales and promotions before they happen. So by signing up for the forum and being an active member you will get first dibs at saving money.

R/C Race Track Update

We finally had our first race and everything went smoothly and as planned. Race Info for every Sunday is listed on the forum.

The races will be held from 3:15pm till 7 or 8pm. Practice will be from 2pm - 3PM. You have till 3:15PM to sign up. Races will be \$5 per

entry per class. Until the racing catches on There will be no special classes, it will be run what ya bring also we will be doing races with a referee spotter at the finish line. If and when the races catch on we will switch over to a transponder system and the race entry will be \$15 for initial entry and \$10 per additional entry. Your entry fees will cover the rental of your transponder. You will be welcome to purchase a transponder also.

Check the Forum for more information

How to Make Model Rockets

How to Make Model Rockets

Building and flying model rockets is a hobby that both children and adults can enjoy. If you want to make a rocket it's not difficult. At the same time, experienced model rocket hobbyists design and build rockets that are very sophisticated, have multiple stages, and carry instruments for measuring altitude and taking aerial photographs. The steps below explain the basic steps to design and make rockets. From there your imagination is the only limit!

THINGS YOU'LL NEED

- hobby knife set
- measuring tape/rule
- artist's paintbrushes
- 1" diameter tube 12-15" long
- 1 short tube 7/8" inch diameter
- 1/4" thick sheet balsa wood
- balsa wood block
- small eyelets screw
- parachute, plastic or rubber o-rings,
- large rubber band
- epoxy glue
- doping (paint)
- fine grain sandpaper
- wadding
- engine

Instructions

1.) Start off with a model rocket kit to become familiar with the steps needed to build and fly a model rocket. Dealers are easy to find online or you can go to a local hobby store. The steps to make a simple rocket from a kit are the same, except you will have pre-cut parts to work with and a proven design.

2.) Shape a block of balsa wood into a nose cone 4" long with a flat base exactly the diameter of the cardboard tube. Trim the base for about 3/4" along the nose cone just enough so it will fit tightly inside the end of the tube. Gently sand the remainder of the nose cone smooth.

3.) Cut a short (1" is enough) length of the smaller cardboard tube and glue it in place far enough up the larger tube to allow the engine to just fit completely inside the tube. You should then glue 2 plastic or rubber o-rings into the tube below this inside tube. These three components will hold the engine in place.

4.) Glue the fins in place on the cardboard tube at the same end as the engine mount. Whether you use three or four

fins, make sure they are evenly spaced and point directly out from the tube. Allow the glue to dry overnight.

5.) Spread a thin coat of the dope (paint) over the entire outer surface of the nose cone, tube (which is now the rocket fuselage) and fins. You may need several coats. If you make a rocket without painting it will still fly. However, the paint reduces air friction and your rocket will fly higher and straighter. Painting also makes the rocket a lot more attractive and you can choose from a variety of colors.

6.) Screw two eyelet screws into the base of the nose cone and attach the parachute to one. Cut the rubber band so it is a long strip and tie one end securely to the other eyelet screw. Glue the other end to the inside of the rocket fuselage (tube) at the top end.

7.) Prepare the rocket for launch by inserting a rocket engine into the base of the rocket. Place wadding inside the tube, then the parachute and rubber band connecting the nose cone and the rest of the rocket. Finally put the nose cone in place at the top of the rocket. Your rocket is now ready to fly!

8.) Test your rocket. You will need a launch kit. This is necessary since model rocket engines are designed to ignite only with an electric current for safety reasons. Choose a large open area and test fire your rocket.

Tips & Warnings

1.) A model rocket engine is designed to expel a small amount of hot gas into the body of the rocket when it burns out. This creates high pressure that forces the nose cone to pop out, allowing the parachute to deploy. The wadding keeps the hot gas from striking and damaging the parachute.

2.) While model rocketry is extremely safe, to make a model rocket requires the use of sharp knives and handling model rocket engines. An adult should supervise both the construction and the actual launching of a rocket.

Local DFW Hobby Clubs

Local Rocket Club D.A.R.S. (Dallas Area Rocket Club)

Is the oldest and largest NAR Chapter in Texas. Flying since 1972, we have been promoting rocketry throughout the Dallas-Fort Worth metroplex nonstop for over 30 years. While flying rockets is our primary activity, our presence reaches out into the community.

A significant portion of our range fees go to local charities. Our outreach program works with The Boy Scouts, YMCA and local educators to encourage the next generation to pursue their interest in science and engineering. And of course, the kids always fly free!

The general public is always welcome to attend any of our launches and join in the fun. Our members fly everything from the small Estes and Quest rockets to custom built high power rockets reaching altitudes in excess of a mile.

North Dallas R/C Club (Airplanes, Helis, Air- field)

Membership in the North Dallas RC Club (NDRCC) is open to everybody, but you must be an active member of the Academy of Model Aeronautics (AMA) before you can join.

The AMA is the official national body for model aviation in the United States. The AMA Safety Code sets the standard for model aircraft operation and forms the cornerstone of the NDRCC safety regulations. The AMA also provides liability, accident, and loss insurance to individual members and clubs. You can obtain further information from the AMA website (<http://www.modelaircraft.org>) or by calling 765-287-1256.

Fort Worth Thunder- birds Radio Control As- sociation (Airplanes, Helis, Fly Field)

Interested in R/C flight?

2011-Training is March 24 - November 3

There are many steps to flying and r/c model, such as: know your aircraft, preparing for flight, pre-flight checks, take-offs, actual flying, and the important one, landing.

Fun Fact: Fort Worth Thunderbird Flight Instructors take care of all of this for you so you can focus on learning from day one.

The Fort Worth Thunderbirds also provide the aircraft, radio equipment, and fuel for you! You don't have to bring anything but a willingness to learn.

The most important thing for you to know is what "controls" the aircraft. The Ailerons, Elevators, and Rudder are collectively called the "Control Surfaces". Throttle controls engine speed or the rpm (revolutions per minute).

North Texas Aeromodel- ers (Airplanes, Helis, Fly Field)

North Texas Aeromodelers (NTA) fly at a field located at a [North Lakes Park in Denton, Texas](#). The park is owned by the City of Denton but the field improvements and maintenance is provided by club and its members.

NTA is known as the friendliest RC Club in North Texas. Everyone is welcome even if you do not own an RC plane or helicopter. In fact, you can schedule an [introductory flight with a club instructor](#) before you buy in to the hobby. You won't find a more helpful and knowledgeable group in North Texas.

Electrix Torment 1/10th Short Course Truck

Created in direct response for a need to develop a durable, fun and affordable vehicle line, Electrix RC™ has provided retailers with the opportunity to gain new customers by offering a great product at an even better price.

What is changing is our approach to the styling, aggressiveness and overall performance of our vehicles. To support these changes, Electrix RC is evolving to ECX™

and will get a face-lift, including high-impact trim schemes, a strengthened relationship between Dynamite® and Spektrum™, and so much more—all providing an opportunity for enthusiasts to fully enjoy the experience of hobby

grade RC without going broke.

The ECX™ Torment™ short course truck combines scale looks with features typically found in higher priced vehicles. Taking the ECX vehicle lineup to the next level, the Torment now includes Spektrum 2.4GHz technology, providing users with extended range and

standard with ball bearings, oil filled shocks, a custom battery strap, battery and charger – providing users with yet another complete RTR (Ready-to-Run) out of the box. Short course has become one of the most popular vehicle platform segments on the market and the Torment short course truck provides enthusiasts with a lower cost entry point into the world of short course.

The Torment will be priced at an affordable **\$169.00**

These trucks are going to go fast when they get here so we are suggesting that pre-orders be made through the website at http://allaboutfunhobbies.com/store/catalog/index.php/cPath/223_294_319 or by calling 817-494-2647 and reserving one now.

This truck will be a great entry vehicle to get into our short course race class on Sundays.

Launching It. In Style.

interference-free operation.

The truck comes equipped with a Spektrum DX2e radio system including the SR200 receiver and, like the other vehicles within the ECX lineup, it comes

Newest Name In Radio Control ARRMA

The new short course king on the block!

The new Fury is fast, fun, strong and looks amazing. Factory assembled with high-quality materials and

extensive product testing, the Fury is ready to tear up the local track, parking lot or garden. ARRMA's

stream-lined, modular design approach means the Fury shares a large number of parts with other ARRMA chassis, which keeps your inventory costs

(Twin Vertical Plate) chassis and front bulkhead skid plate

• Longer chassis allows for either a 6- or 7-cell NiMH or 2S LiPo battery pack; battery door is also

longer and located on bottom of chassis for easy access

• Factory-printed 'Salvadore' polycarbonate bodyshell is strong yet light-weight

• 2.4GHz ATX300 transmitter and ARX300 receiver; 3-channel transmitter features the unique sevenposition

steer-wheel, which allows comfortable

left- or right-hand operation

• MEGA 15T brushed motor and water-proof ESC

• dBoots 'Sidewinder' short course tires and chrome spoked wheels

• Tough steel driveline and turnbuckles

• Oil-filled metal gear differential

• Oil-filled shocks and performance springs

- Splash- and dust-proof receiver box
- Hex hardware throughout

Specifications

Length: 21.26 in (540 mm) **Height:** 7.87 in (200 mm)

Width: 11.6 in (295 mm) **Wheelbase:**

12.99 in (330 mm)

Requires: 7.2 or 8.4V NiMH or 2S LiPo battery, battery charger, and four "AA" batteries for transmitter.

The Fury will be priced right around

\$259.00

pre-orders can be made through the website at www.allaboutfunhobbies.com or by calling 817-494-2647 and reserving one now.

This truck will be a great entry vehicle to get into our short course race class on Sundays.

low. Like all of ARRMA's vehicles, the Fury is brushless ready,

LiPo ready, and backed by a two-year warranty and terrific product support. It's a tough truck able to handle

serious power and keep going, and going, and going!

Features

• 30+ mph with standard 7.2V NiMH battery pack and included 15T motor

- Aluminum TVP

• Brushless-ready all-metal transmission

• Adjustable, precision slipper clutch

Visit us on the web @
www.allaboutfunhobbies.com

Welcome to All About Fun hobbies and games, where it's all about the fun. We are a family owned and operated full line hobby shop. We are excited to meet new people and hopefully we can grow with you in your hobby interests.

The Hobby Shop News is geared towards keeping you and us informed of the changes in our hobby interests. This will be the first issue and we will send one issue a month out. As it grows we will add more content and more pages covering more than just R/c. So Stay tuned.

All About Fun Hobbies & Games Specializes in Nitro and electric remote control Cars, Trucks, Airplanes, Helicopters and even boats. We also carry plastic models, Die cast, Airsoft pellet guns and accessories, model rockets, slot cars, Woodland Scenic landscaping supplies, Scene-O-Rama School project supplies, and accessories, science & education sets, even fish & aquarium supplies and much more. If you're not finding what you think you should be on the website, call 817-494-2647, email wjordan@allaboutfunhobbies.com or better yet come on by and say hi.

IT'S ALMOST MONSTER JAM TIME

Last year we help host and sponsor an R/C rally at the Monster Jams, we raffled off an R/C truck, had Hot dogs, Hamburgers, Pulled Pork more food than everyone could possibly eat. Tons of R/C cars out there Ramps set up, Tons of people, Tons of fun and best of all MONSTER TRUCKS SMASHING AND CRASHING their way through a killer obstacle course and making LOTS OF NOISE!!!!

This year we will be doing the same as last year with the ticket purchasing and sign ups. We will be sending out the E-Invitation for you to RSVP ahead of time and try and save you a seat with our group. Tickets will be available to purchase through the [website](#), over the phone 817-494-2647 or right in store.
